💻 Electronics Price Prediction System - FINAL VERSION

AI-Based Regression Model for Multi-Category Electronic Products

UCS321 JAN-MAY 2026 - MST Project

📋 Project Overview

This project develops an AI-based regression model to predict selling prices of **multiple electronics categories** (audio, computers, phones, cameras, etc.) on online platforms using:

- ✅ Product specifications (extracted from titles)
- ✅ Customer ratings
- ✅ Sales volume trends
- ✅ Discount percentages
- ✅ Market indicators

Key Improvements Over Previous Versions:

1. ✅ **OneHotEncoder** instead of LabelEncoder (proper categorical handling)
2. ✅ **Technical feature extraction** (RAM, storage, brand from title)
3. ✅ **Reduced "Other" category** (cleaner classification)
4. ✅ **Removed useless features** (has_coupon - all 1s)
5. ✅ **Added engineered features** (popularity_score, price_per_review)

📊 Dataset Information

- **Source**: Amazon Electronics Scraped Data
- **Size**: ~42,000 products
- **Categories**: Audio, Computer Accessories, Phone/Tablet, Camera, Wearables, etc.
- **Features**: Ratings, Reviews, Sales, Discounts, Product Specs

```

================================================================================
💡 KEY BUSINESS INSIGHTS & PRICING FACTORS
================================================================================

1️⃣ MODEL PERFORMANCE
   • R² Score: 0.9879 (98.8% of price variance explained)
   • MAE: $2.09 (average prediction error)
   • RMSE: $9.96
   • This means we can predict prices within ±$2.09 on average

2️⃣ TOP 5 PRICING FACTORS
   1. price_per_review: 58.76% importance
   2. num_reviews_clean: 24.88% importance
   3. popularity_score: 9.47% importance
   4. product_category_Computer Accessories: 1.29% importance
   5. sales_volume: 1.13% importance

3️⃣ CATEGORY PRICING INSIGHTS
   Top 3 most expensive categories:
   • Computer/Laptop: Median $129.91 (n=1861
   • Audio: Median $114.00 (n=3779
   • Wearables: Median $89.99 (n=260

4️⃣ 🔥 TECHNICAL SPECIFICATIONS IMPACT
   • RAM: 2GB→128GB increases price by -70.1%
   • 16729 products have storage specs extracted

5️⃣ RECOMMENDATIONS FOR PRICING STRATEGY
   1. Focus on technical specs (RAM, storage) for tech products
   2. Category positioning is critical (>7% variance)
   3. High ratings + review volume justify premium pricing
   4. Discount strategy matters (negative correlation with price)
   5. Brand reputation contributes to pricing power

🎯 EXAMPLE PRICE PREDICTIONS
============================================================

📱 Budget Wireless Earbuds:
   Category: Audio
   Brand: Anker
   Rating: 4.2 (500 reviews)
   💰 Predicted Price: $25.86

📱 Premium Gaming Laptop:
   Category: Computer/Laptop
   Brand: Asus
   Rating: 4.7 (3000 reviews)
   Specs: 32GB RAM, 1024GB Storage
   💰 Predicted Price: $374.13

📱 Smartphone Accessory:
   Category: Phone/Tablet Accessories
   Brand: Anker
   Rating: 4.4 (1200 reviews)
   💰 Predicted Price: $13.54

============================================================
```

---

13. Project Summary

🎯 What Was Accomplished

1. Dataset: ~30,000 electronics products across multiple categories

2. Features:

- ✅ Market-based: Ratings, reviews, sales, discounts
- ✅ 🔥 **NEW:** Technical specs (RAM, storage) extracted from titles
- ✅ 🔥 **NEW:** Brand extracted from titles
- ✅ 🔥 **NEW:** Popularity metrics engineered

3. Improvements Over Previous Version:

- ✅ **Fixed:** OneHotEncoder for categories (not LabelEncoder)
- ✅ **Removed:** Useless features (has_coupon)
- ✅ **Improved:** Category classification (less "Other")
- ✅ **Added:** Technical feature extraction
- ✅ **Added:** Brand extraction
